

GPS Watch Brief Instructions

Step 1: Get a new SIM card

- 1). Get a new Nano SIM card.
Choose Nano SIM card as below instruction.

- 2). Activate the SIM card's Cellular data plan and Caller ID display function. (Tracking and sending voice chats need consume

data, making phone calls also needs charges.)

Step 2: SIM card installation and power on

- 1) Please make sure the watch is powered off before inserting SIM card;
- 2) Use screw driver among accessories to install SIM card;

- 3) Lock the SIM card and fasten the plastic cover with screw to avoid getting water inside;
- 4) Please use the magnet charging cable for battery recharge.

Step 3: Power on the watch

After SIM card installation, press the small button on the watch right side for about 3

seconds. Screen lit up and power on.

Step 4: Get familiar and start to use the watch.

Step 5: Install APP by wearer's Guardian

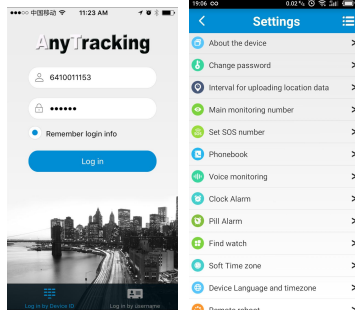

Download and install GPS tracking APP in guardian's smartphone via scan QR code in watch or user manual.

Step 6: Log in APP

Log in the APP with the 10 digits ID No. and default password 12356. (If possess

more than one GPS watch, please contact the after-sale servicer for an account to monitor all your watches under it.)

Step 7: Set SOS numbers in APP

Find the menu of "Settings", and set SOS number for urgent calls;
Other numbers can be set in "Phone book" settings for daily calls.

More APP settings can be found in "FAQ" section of the APP. All settings shall be done when the watch powers on with GSM signal and data available.

Step 8: SOS urgent calls

Press SOS button (the bigger one) for 3-5 seconds to make calls to the three numbers preset.

Short press for talking clock function.

Step 9: Daily phone calls function

Make calls to guardian: Slid the screen and find the phone book interface, click the number you need to dial to make a call.

Pick up coming calls: Click the green button to pick up a coming call with ringtone and vibration notifications; Reject the call by clicking the red hang up button.

Step 10: Check location in APP

- 1) After SIM card installation, please make sure signal and data status display right;
- 2) Guardian can check watch wearer's

latest location in APP map.

Note: When the watch is indoors, it is usually being located by GSM towers' signal or WIFI hot spots, so the accuracy will be poorer than outdoors GPS. Besides, metal or other stuff may block GPS signal as well. Thus, sometimes accuracy problem does not belong to quality issue.

Step 11: Heart beat and blood pressure inspection

GPS watch's HB&BP function provides elderly people a reference value of heart beat and blood pressure.

Notes:

- 1) To get an ideal result, please follow the instruction above to keep the arm horizontal with heart level;
- 2) Make sure the watch bottom contacts wearer's wrist and wait for 40 seconds;
- 3) Guardian can check relevant health

status by reading watch wearer's heart beats and blood pressure records via APP remotely.

Step 12: Power off

Press 5 times shortly to power off the watch.

FAQ

The watch has no signal after Sim card installation.

- 1) Please check the SIM card's data plan has been activated;
- 2) User didn't power off the watch before SIM installation. Please power off and on to check. User is strongly

recommended to install SIM after powered off the watch;

It says "Device is Offline" when saving telephone number in APP.

Please confirm SIM card installed or not. If yes, please check the signal and data status.

I was told "The number you dial is busy now" when calling the GPS watch.

- 1) Make sure numbers have been set before. (To ensure the safety of wearer, only numbers saved via APP settings can make phone calls to the watch.)
- 2) Make sure SIM card's Caller ID display has been activated.

Sometimes the watch locations are not accurate.

- 1) Please take the watch outdoors or near under the open sky to get GPS signal;
- 2) Guardian can enter "Real-time tracking" from APP and refresh tracking by clicking the refresh button ;
- 3) Change the "Interval time" into 1 minute in urgent situation.

In audio calls, sometimes I got noise, echo or even screech.

- 1) When calling phone is near the GPS watch, speaker gets cell phone signal

disturbing, which causes noise or even screech;

- 2) To ensure waterproof, the watch microphone and speaker are covered by Nano materials which may cause echo. Wearer can turn down the speaker volume to reduce echo.
