

## How to find out the right relay for your car?

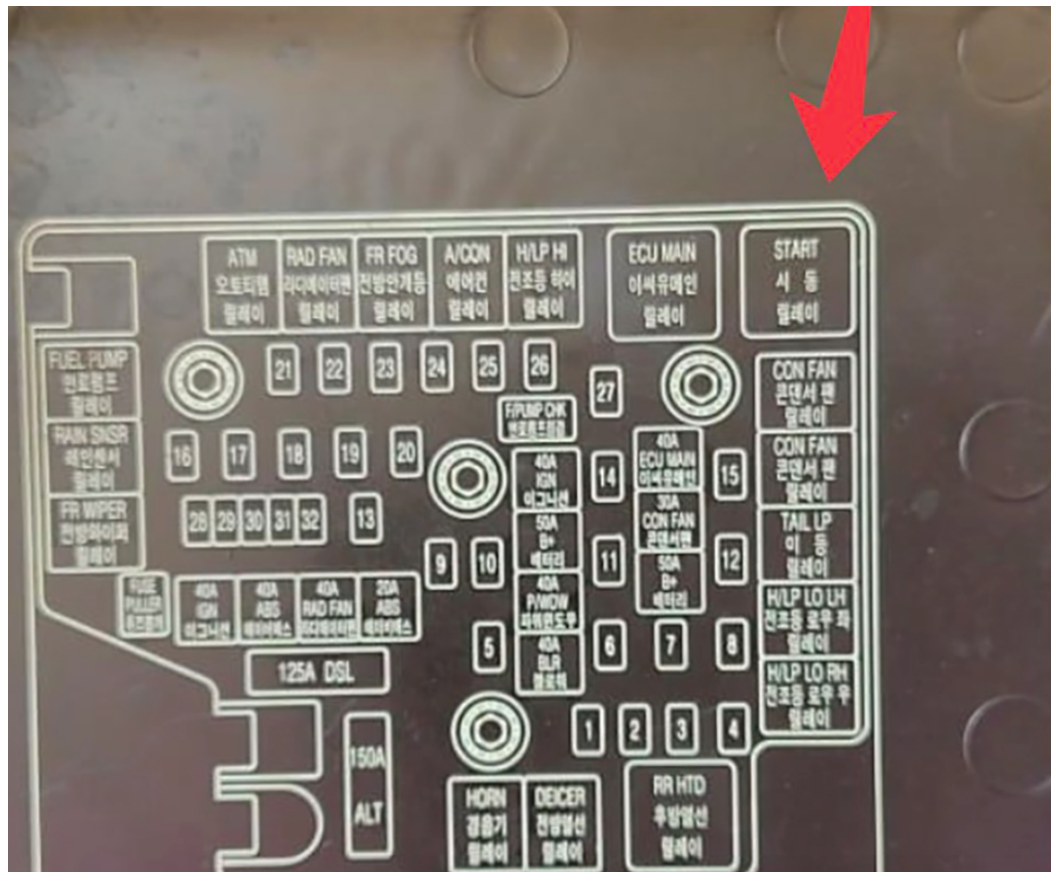

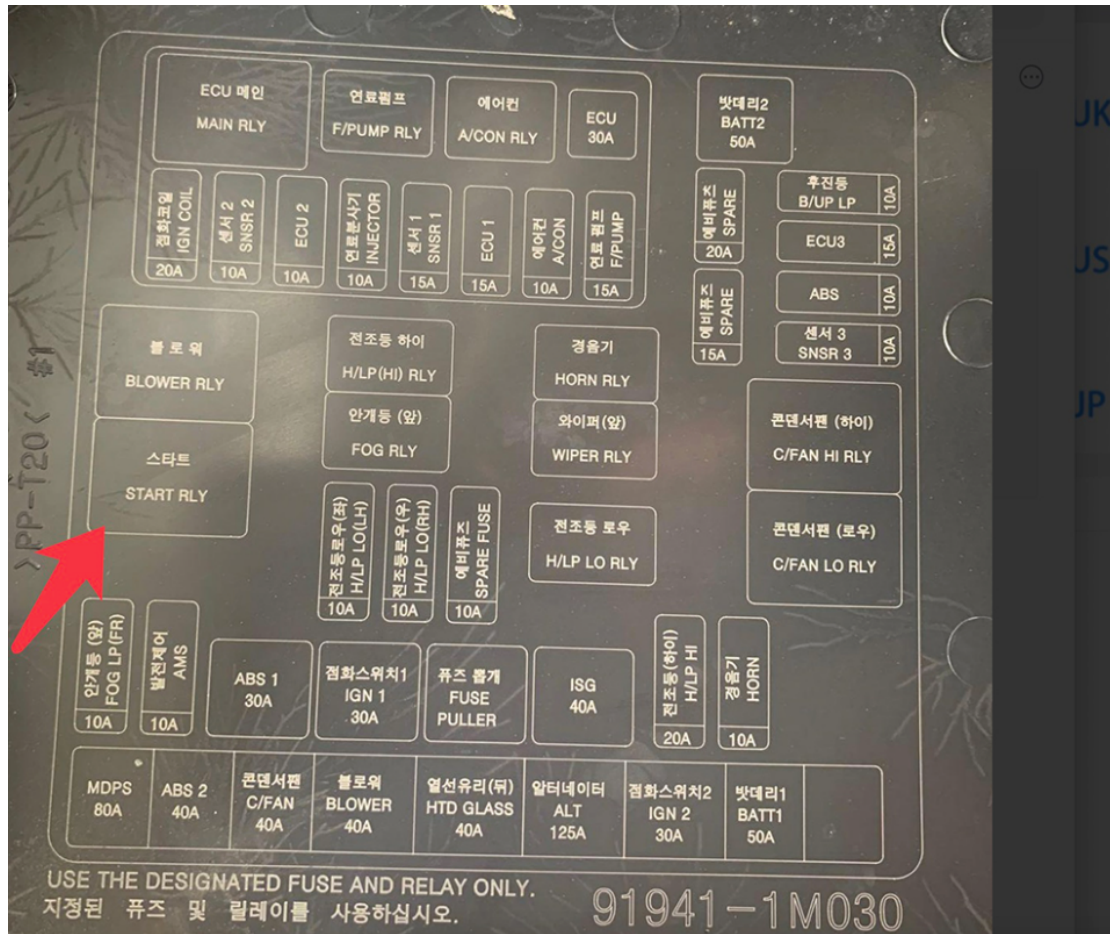

When place order, please kindly choose the right relay, unless it can't work.  
Then how to find out the right relay on your car?

Step 1: open engine cover, find out the fuse box (RELAY & FUSE).

Step 2: check the "circuit diagram" shown on the fuse & relay box cover. There are many kinds of relay inside, we only need the "Start Relay", it's also named as "Start RLY" / "Start" Or just a icon something like half circle with arrow.

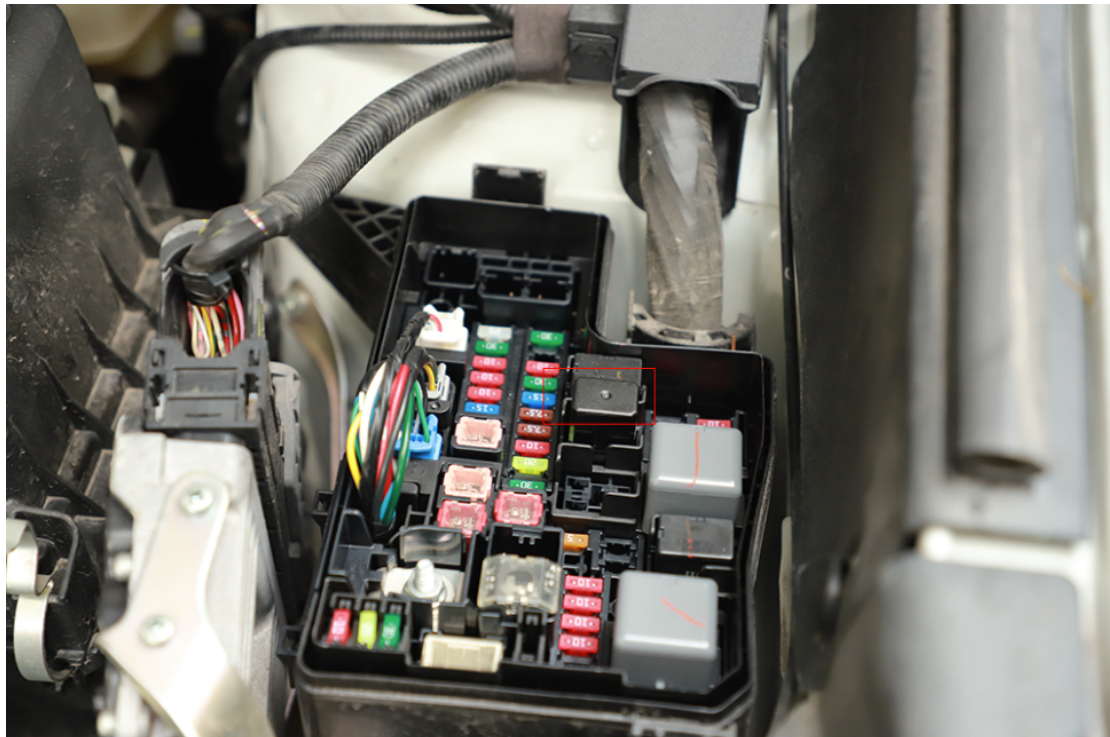

**Step 3: according to the "circuit diagram" to find out the right relay at the right location.**

**Step 4: once you find out the right relay, pls take it off and try to turn on your car. If without the relay, your car can't turn on any more. It means you found out the right relay.**

Pls take some photo for the right relay and send it to us, we will tell you the relay number so that you can place order. Or compare it with below photo, and place order, then leave us the message about the right relay number.
